

ANKUSH KUNDAPURA ANNAIAH

Software Engineer · AI/ML Developer · Python · Scalable Systems · GenAI

ankushkundapuraannaiah@gmail.com | Bengaluru, India | linkedin.com/in/ankushkundapura-annaiah-1797ba384 | github.com/ankushkundapuraannaiah-bit

PROFESSIONAL SUMMARY

Motivated B.Tech CSE (AI & ML) student and active Software Engineer with industry internship experience building production-ready AI systems, automation pipelines, REST APIs, and scalable backend tools. Proficient in Python, data engineering, and LLM-based software development. Applies sound engineering principles to deliver reliable, high-quality software in collaborative, cross-functional teams. Demonstrates a growth mindset through rapid adoption of new tools, consistent best-practice application, and active participation in hackathons and technical communities. Seeking a Microsoft Software Engineering Internship to build next-generation software solutions that empower people and organizations at scale.

EXPERIENCE

GenAI Developer Intern · HiDevs · Bengaluru, India

Feb 2026

- Engineered scalable AI software prototypes using Python, LangChain, and Hugging Face Transformers — applying sound engineering principles to build reliable, production-level GenAI features.
- Determined user requirements for AI-powered features by collaborating closely with team leads and cross-functional stakeholders; translated requirements into robust technical solutions.
- Built and maintained RAG (Retrieval-Augmented Generation) pipelines integrated with vector databases, improving system reliability, retrieval accuracy, and response observability.
- Proactively researched and adopted new engineering methods, tools, and frameworks (LangChain, transformer fine-tuning, prompt engineering) — incorporating best practices into development workflows within days of discovery.
- Sought and applied feedback from senior engineers to iteratively improve software quality, efficiency, and performance of AI tools and automation scripts.
- Demonstrated strong time management by delivering working prototypes, evaluation datasets, and documentation on schedule within a cooperative, agile team environment.
- Reviewed recent AI/ML developments and proactively contributed knowledge of emerging techniques to improve product availability, reliability, and operational consistency.

Python Developer Intern · Pinnacle Labs · Bengaluru, India

Jan 2026 – Feb 2026

- Developed Python automation scripts and data preprocessing pipelines using NumPy and Pandas, improving processing efficiency and data quality for downstream ML workflows.
- Built REST API integrations and contributed modular backend components — following software engineering best practices for maintainability and scalability.
- Collaborated effectively in a team environment, completing assigned software tasks within deadlines while maintaining clear documentation and code quality standards.

PROJECTS

Scalable RAG System – LLM Knowledge Grounding · Python · LangChain · Vector DB · REST APIs 2026

- Designed and implemented a production-grade Retrieval-Augmented Generation system — architecting the full pipeline from data ingestion and embedding to retrieval and LLM response generation.
- Applied engineering principles to optimize system performance and observability: benchmarked chunking strategies, embedding models, and retrieval methods; documented results for team-wide knowledge sharing.
- Integrated REST APIs and vector databases into a unified, modular codebase — enabling extensibility, consistent monitoring, and scalable deployment.

LLM Fine-Tuning & Evaluation Pipeline · PyTorch · Hugging Face · Scikit-learn · Python 2026

- ▶ Built an end-to-end software pipeline for fine-tuning large language models on custom datasets, including data cleaning, model training, evaluation, and performance reporting.
- ▶ Applied best practices in ML engineering: modular code design, version-controlled experiments, reproducible training configs, and structured evaluation metrics to measure reliability and quality.
- ▶ Generated test case datasets and automated benchmarking scripts to ensure consistent model performance monitoring across iterations.

AI Automation Toolkit · Python · LangChain · Jupyter · Git

2025–2026

- ▶ Developed a modular Python toolkit to automate repetitive engineering and data tasks using AI-powered text classification, extraction, and summarization — reducing manual effort and increasing team efficiency.
- ▶ Followed cooperative development practices: maintained clean Git history, wrote documentation, and incorporated peer feedback to iteratively improve code reliability and usability.

OpenHack 2026 – AI/ML Hackathon · Python · Rapid Prototyping · Team Collaboration 2026

- ▶ Collaborated with a cross-functional team to scope, design, and build a working software prototype in the AI/ML track under tight time constraints — demonstrating creative engineering under pressure.
- ▶ Contributed to full software lifecycle within the hackathon: requirements scoping, solution design, implementation, testing, and presentation to judges.

TECHNICAL SKILLS

Languages & Core: Python (Advanced) · SQL · Bash · HTML · CSS

Software Engineering: REST API Development · Modular System Design · Scalable Pipeline Architecture · Code Review · Unit Testing · Agile / Scrum

AI & ML Engineering: LLM Integration · RAG Systems · Model Fine-Tuning · Model Evaluation · Prompt Engineering · LangChain · Hugging Face Transformers

Frameworks & Libraries: PyTorch · TensorFlow · Scikit-learn · NumPy · Pandas · Hugging Face

Systems & Tools: Git · GitHub · Jupyter Notebooks · VS Code · Linux · Vector Databases · REST APIs

Engineering Practices: Reliability Engineering · Observability · Performance Optimization · Documentation · Best Practice Adoption · Growth Mindset

Soft Skills: Cross-functional Collaboration · Stakeholder Communication · Time Management · Feedback Incorporation · Creative Problem Solving

EDUCATION

B.Tech – Computer Science Engineering (AI & ML) · REVA University, Bengaluru Sep 2025 – Sep 2029

- ▶ Specialization in AI & ML — covering algorithm design, data structures, software engineering, deep learning, and scalable systems.
- ▶ Actively participates in hackathons (OpenHack 2026, Codeathon) and engineering communities; independently learns and applies emerging technologies.

CERTIFICATIONS & ACHIEVEMENTS

- ▶ Team Essentials for Designing AI Solutions — AI model design, system architecture, and engineering best practices
- ▶ Data Streaming Engineer Foundations — real-time data pipelines, streaming architectures, and large-scale system design
- ▶ Introduction to Cybersecurity — security-aware software engineering and system design
- ▶ OpenHack 2026 — Certificate of Participation, AI/ML Track (Microsoft-affiliated hackathon)
- ▶ Codeathon — Certificate of Participation, AiFi · AIML Club, SoCIT

Available 20+ hrs/week · Open to immediate start · Code samples available on request
